Git

Job Experience

My professional journey in web development has been shaped by continuous learning and building personal projects. This journey has given me the opportunity to tackle a variety of development challenges, strengthen my problem-solving skills, and turn theoretical knowledge into practical experience.

Personal Projects

Real-time Chat Application with Next.js

[GitHub Repository](#)

A real-time messaging application inspired by the Telegram experience, built with a focus on modular architecture, clean code, performance, and scalability. The project is fully containerized with Docker and follows a multi-service architecture.

- Real-time messaging with a smooth experience inspired by modern messaging platforms
- Feature-based modular architecture following Clean Code principles
- Extensive use of Next.js Server Actions with structured error handling
- Integrated authentication powered by Better Auth
- Data management and caching with Prisma, MySQL, and Redis
- Multi-service infrastructure with Docker and a development environment optimized with Bun
- Modern and responsive UI built with Tailwind CSS and shadcn/ui
